

# ABSTRACT OF THE DISCLOSURE

A user aboard a vehicle having installed therein an on-vehicle apparatus originates a call to an information center to indicate the specific type of information the user wishes to receive by following audio guidance provided by an interactive voice response device installed at the information center. The information center prepares the information desired by the user and transmits the information to the on-vehicle apparatus. In this vehicle information providing method, the contents of the audio guidance provided by the interactive voice response device are edited for each user based upon information pre-registered by the user.
